Comment: "Idaho Power has proposed a massive rate increase that I believe is neither reasonable nor fair. This comes as Idaho Power continues to undermine rooftop solar adoption, limiting one of the cleanest and most cost-effective energy solutions we have. As a consumer, this appears to not be in the best interest of Idaho Power's customers. The 17%+ proposed increase exceeds the rate of inflation and would disproportionately hurt working families, small businesses, and Idahoans on fixed incomes—especially at a time when so many are already struggling with rising costs for housing, groceries, and healthcare. Is Idaho Power willing to provide financial support to those who will be most affected by this increase? Please contact me for further thoughts and opinions, interesting timing w/increasing temperatures which are significantly driven by the lack of using renewable energy...coincidence??"

Comment: "I am asking the Idaho Public Utilities Commission to deny Idaho Power's rate increase. This increase exceeds the rate of inflation and would disproportionately harm working class families at a time when several are already having difficulty making ends meet due to higher costs in groceries, housing, and healthcare.

Thank you
Jim Pape"

Comment: "The rate increase should be applied to NEW customers. Not existing customers. Especially long time existing customers. Those of us who have been here for decades didnt ask for all these people to move here. The demand for more power infrastructure was caused be the growth of population by new residents moving in from out of state. They should eat the cost. "
